# XactScope for
Water Mitigation

From initial scope to final estimate, the automation tools in Xactimate Sketch will easily guide your scoping withinthe complexities of water mitigation rules. So you can forget juggling all the tools, apps, notes, measurements, and data to follow industry drying standards.

Use the XactScope® tab

Find Xactimate Water Mitigation under the XactScope tab available in Xactimate desktop (X1) and online.
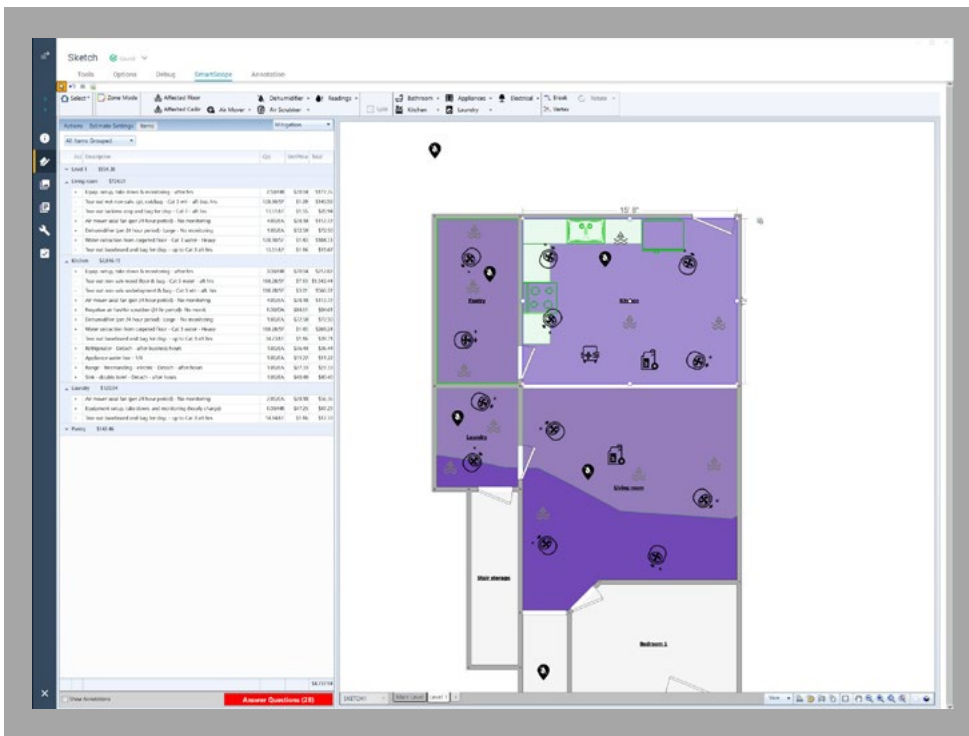

You scope the loss, XactScope does the rest

As you answer a set of guided questions within Sketch, XactScope intelligently and automatically adds all the line items, quantities, and actions based on current IICRC S500 standards for professional water damage restoration.

Crunching the equipment numbers

XactScope performs calculations for all the equipment required for any water mitigation job. Each equipment icon is connected to the correct line item with not just the capacity ratings, but also a directional arrow to indicate how the air is being moved throughout the space.

The power of consistency

XactScope's standardized water mitigation process delivers a number of advantages for mitigation pros.

• All annotations depict which line item is used.
• Every estimate is created in the same order.
• All line items are placed in the correct room.
• Thorough scoping means fewer supplements.
• A simpler review process and faster workflows make shorter claims handling cycles.

Available with Xactimate Professional

XactScope features are available only with your Xactimate Professional license.
