

Xactimate® mobile: Time-Saving Advantages

Xactimate mobile can be used to estimate repair costs on-site, giving adjusters and contractors a distinct advantage over traditional estimating methods. Using Xactimate mobile alongside other Xactimate platforms (desktop and online), professionals can optimize their workflow and accomplish more each day.

Here are a few major ways Xactimate mobile helps speed up and improve the estimating experience.

Photo Upload and Annotation

Xactimate mobile combines photos and annotations into a simple, single step. As you take photos with your mobile device, they're uploaded automatically to your claim. And your on-site annotations go with them.

Mobile
Desktop

73%
Faster

Photo Upload: Taking photos on-site, directly into an estimate, compared to taking photos and uploading to a computer and adding to an estimate in Xactimate desktop.

Mobile
Desktop

55%
Faster

Photo Annotation: Directly annotating photos, taken and added in-app compared to taking photos, uploading to a computer, and adding annotations using Xactimate desktop.

Item Entry

Xactimate mobile makes suggestions for commonly added items based on your loss type. This makes it especially easy for less experienced adjusters to find just the right items quickly.

Mobile
Desktop

38%
Faster

Adding line items to an estimate, using the "commonly added for loss type" feature in mobile, compared to search-and-add in Xactimate desktop.

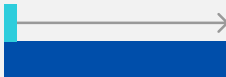

App Updates

Xactimate mobile automatically receives the latest software updates, so there's hardly any waiting for update downloads and installations. Xactimate mobile is ready to go at a moment's notice.

Mobile
Desktop

99%
Faster

Installing automatic updates from the App Store compared to downloading and installing updates to Xactimate desktop.

Sketch AR™ + LiDAR

With a LiDAR-enabled Apple device*, you can generate sketches in Xactimate mobile with greater ease and precision. Just point and tap on walls and add room features, such as doors and windows. Xactimate mobile then generates a 3-D sketch of the room in seconds.

*Currently available on iPhone 12 Pro, iPhone 12 Pro Max, the iPad Pro 2020, or newer models.

Voice Notes

Xactimate mobile lets you take notes verbally, rather than having to type them into your laptop. You can take notes as you go, saving time as you move about the site.

Mobile
Desktop

58%
Faster

Speaking and recording a voice note into a mobile device, compared to typing notes into Xactimate desktop.

Optimized for On-site Productivity

When your primary estimating tool fits in your hand, it's a simple matter to work as you go, with no need for jotting down handwritten notes and repeatedly returning to a workstation to enter data. Plus, using on-site technology for your estimating and data gathering provides a professional touch, instilling confidence among policyholders.

Easing the Learning Curve

Xactimate mobile is especially user-friendly for novice adjusters, reducing the learning curve and providing valuable experience without sacrificing policyholder-facing performance.
