# Verisk Synergy Studio

## Your Questions Answered

## What is Verisk Synergy Studio?

Coming in 2026, Verisk Synergy Studio is an advanced catastrophe modeling and risk management platform. Built to support innovation, this platform's scalable architecture can empower you to manage risk of any size, from a single policy to global interconnected exposure. Building on the legacy of Touchstone® and Touchstone Re™, Verisk Synergy Studio leverages our industry-leading suite of catastrophe models, empowering you to transform analytics into decisions.

## What can my organization do with Verisk Synergy Studio?

We designed Verisk Synergy Studio with workspaces to accommodate a range of cat modeling and risk management use cases and propel your organization into the future.

Understand your exposure and analyze risk from catastrophe events of all types around the world

Monitor exposure to catastrophe events as they're happening in real time

Validate catastrophe models on your business and efficiently manage change as models are updated

Automate your insurance and reinsurance workflows from pricing through portfolio management

Manage and monitor underwriting and risk management activities across your organization

Perform catastrophe risk analysis on all exposures— from policy to portfolio to reinsurance—for:

- Individual locations and policies at the point of underwriting
- Detailed exposure portfolios of millions of locations and policies
- Aggregate exposure and loss results for reinsurance underwriting and pricing
- Insurance-linked security instruments, including cat bonds, industry loss warranties, sidecars, and others
- Rolled-up portfolios of reinsurance treaties and ILS instruments, including retrocessions
